RESEARCH EXPERIENCE

Turán Number of Linear 3-Graphs

Dec 2020 - Oct 2021

Advisor: HEHUI WU

Shanghai Center for Mathematical Sciences, Fudan University

• We introduced a new approach to this kind of problems. By this new method, we proved and strengthened a conjecture of András Gyárfás about the Turán number of a linear 3-graph. ([arXiv:2109.10520v3](#))

Shannon Capacity of Graphs

Oct 2021 - present

Advisor: HEHUI WU

Shanghai Center for Mathematical Sciences, Fudan University

• We are currently working on the Shannon Capacity of odd cycles. Our approach is to find a bound of independence number of C_{2n+1}^k , which is the strong product of k $(2n+1)$ -cycles.

Planar Turán Number

Jan 2022 - present

Advisor: ERVIN GYÖRI

Alfréd Rényi Institute of Mathematics & Budapest Semesters in Mathematics

• We have found a new approach to prove the Planar Turán Number of C_5 , i.e. to partition the graph into triangular blocks and calculate the “contribution” of each block. We’ve also found a better extremal construction.

Rigidity and Tensegrity Properties of Graphs

Jan 2022 - present

Advisor: TIBOR JORDÁN

Eötvös Loránd University & Budapest Semesters in Mathematics

• We are currently exploring several conjectures in this field, trying to establish some connections between graph rigidity and tensegrity.
